Statement of Work For:
# Website Design & Development

Distributed Compute Labs
March 11th, 2020

## Summary

This Statement of Work confirms that Distributed Compute Labs ("DCL") has engaged the Queen's Software Developer's Club's ("QSDC") to redesign its website at the domain distributed.computer (the "Website"). This project has an anticipated completion date on the week of Monday, April 6th, 2020. Its deliverables, expectations, and other details are listed below. The compensation to QSDC for successful completion will be $1,000 CAD plus applicable taxes.

## Deliverables

QSDC agrees to use a combination of materials provided by DCL and their own design and development expertise to remake the Website. It is understood that this is an entirely new design, which may or may not be influenced by aspects of the current version. The specific deliverables will include:

1. A new Website design consisting of seven pages, of which six already have templates designed for them:
    i.   Landing Page
    ii.  "The Technology"
    iii. "The Distributed Computer"
    iv.  "For Enterprise"
    v.   "For Research"
    vi.  "Features"
    vii. A developer signup page, with a small sample of DCL code and copy designed to convert visitors into beta users. More information will be provided on this, and it should come after the other pages.
2. All related code files, directory files, and supporting documentation which may include graphics, suggestions for future additions, etc.
3. A document with QSDC's confirmation that the work and elements thereof was entirely their own, with no elements that DCL has no right to use.

DCL agrees and requests that QSDC uses their best judgement as web designers to make edits and/or suggestions on copy, graphics and graphic placeholders, user interfaces, and any other design related functionality.

The Website is expected to be constructed solely within the scope of JavaScript, HTML, and CSS. React.js or similar JavaScript frameworks may be used, <u>subject to approval by DCL</u>.

QSDC is not obligated to provide finalized graphics for use in this website, although as mentioned design recommendations and rough mockups are much appreciated.

Creating user accounts is not included in this project. DCL will connect its portal with this functionality to the Website after complete, which is outside the project's scope.
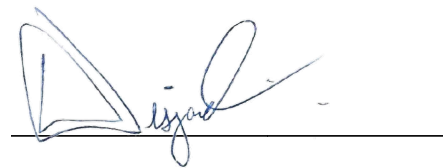

## Expectations

DCL will maintain a relatively hands-off approach to this project, especially with regards to the technical elements. However, the DCL contact (andrew@distributed.computer) will answer any questions and generally advise QSDC on specific elements of the design not captured in this document. The primary contact from QSDC will be Sebastian Dobrowolski (qsdc.sponsorships@ams.queensu.ca).

QSDC will check in with DCL to update on its progress (at least once a week), and may request more meetings as needed. QSDC will take every reasonable effort to deliver the Website on time, free of errors/bugs.

## Acceptance Criteria

The final deliverables will be handed over the week of April 6th, 2020. DCL and QSDC will sign a document confirming the project has ended as expected.
